

MAUIWeb™ BY INFOVISA TAKES ON A NEW LOOK

February 17, 2009

Cornelius, NC – The widely popular product, MAUIWeb, has been completely redesigned to accommodate an ever changing market. MAUIWeb is the client Internet access product that provides account information to customers of INFOVISA's clients. Since its original introduction in 2000 MAUIWeb has seen a high adoption rate as wealth management firms look for ways to better serve their clients and control costs.

INFOVISA decided to completely redesign MAUIWeb after a careful review of consumer needs in the market, current security demands, and functionality that is available with today evolving web-based technology. In addition, by implementing new technology standards INFOVISA has built a platform using Microsoft's .NET development platform that will easily accept future enhancements to further the end-user experience. INFOVISA will continue to expand MAUIWeb's functionality so that their clients are able to provide a higher level of service to their clients.

MAUIWeb will continue to be hosted in INFOVISA's data centers in a SAS 70 environment and will provide customers with 24x7 access to their account information from anywhere in the world.

End users will retain the same functionality that they have today such as account details, complete account history, and statements. New functionality to MAUIWeb includes improved graphing features, new security enhancements, more detail, and a highly anticipated "Dashboard" function. Users will also now have the option to modify how account details are displayed to them so that they may see the detail they want and in a format that makes sense to them.

"We have earned a reputation for constantly improving on our already superior products and services" said Mike Dinges, President of Infovisa. "This re-write of MAUIWeb using .NET and AJAX technologies provides us with a solid foundation for future development of MAUIWeb and additional products and services," Dinges went on to say.

INFOVISA is a privately held software development & services company dedicated to serving the needs of the Trust and Wealth Management industry. By utilizing their **Innovation by Design™** approach they are able to offer innovative solutions to asset management and investment professionals. Organizations that deploy the **MAUI™** suite of premier products and services are able to significantly streamline their operations, further customer relationships, and reduce overall costs. Since introducing MAUI in 1997, INFOVISA continues to expand and much of its success can be attributed to their dedication of software development and aggressively expanding their product offering. The national headquarters for INFOVISA is in Cornelius, North Carolina with offices in Denver, Colorado and Lincoln, Nebraska.
